**Subject:** RE: Noise Setbacks for Mines

Hi Donna,

I agree with the statement that a setback distance of 1,300 feet from noise sources associated with extractive operations would comply with the County noise standard at any property line.

However, it would be safe for the study and/or plot plans to clearly demonstrate that a 1,300 feet setback is a part of the project. I'll keep this in mind as I review the noise section of the project.

Thanks,

### Emmet Aquino

Emmet –

I am reviewing the Soitec Minerals chapter and the following is stated”

*The closest private property line would be within 1,300 feet of the project, which is the noise setback that past County approved noise studies have indicated is needed for most typical extractive operations.*

Is this a true statement for noise setbacks for mines?

Thanks,

**Donna Beddow**
